

Why buy a wind energy system?

From irrigation pumps and processing equipment to simple heating and lighting applications, rural properties consume large amounts of electricity in their day to day operations. Next generation wind turbines are robust, durable, and engineered to produce power in rugged rural environments year after year. As well, recent technological advances in wind turbines are designed to produce more electricity at lower wind speeds, substantially improving the economic viability over earlier turbine designs.

Wind energy is simple, reliable, and efficient requiring minimal maintenance and have low operating costs.

Key Benefits

- Lower cost of energy
- Security against escalating electricity costs
- Small footprint
- Reduced carbon footprint
- Promoting community values
- Substantial incentive programs available

ALL SAVE ENERGY offers comprehensive energy solutions for homeowners and businesses that assist them in lowering utility bills, reducing environmental impacts, and increasing energy reliability and independence.

We look forward to working with you to help you find the optimum energy efficiency and/or renewable energy solution for your needs. Contact our team of professionals for an initial consultation. With your annual energy usage and location, a preliminary cost proposal will be provided. It's that simple. We are ready to take your project from start to finish.

Reduce. Renew. Save. Simple.

KEY BENEFITS

A smart investment

When you purchase a renewable energy system, it's like buying 20-30 years of energy at a fixed, predetermined cost locking in power at a fraction of the current charges and preventing future rate hikes. And since renewable power offsets utility power, your savings will double every 10 years if electric rates increase at their historic average of 6.7%.

Federal, State and utility/cooperative based incentives for renewable energy applications can greatly improve the economics of your ownership.

Increase your property value

Investing in well designed renewable energy system adds lasting value to your home or business without increasing your property tax assessments.

Decrease greenhouse gases

Renewable energy reduces the impact on the environment. This energy offsets the amount of electricity you draw from the grid, decreasing greenhouse gases emitted. Unlike other sources of energy, renewable energy produces no harmful byproducts and it is a completely renewable resource. Modern systems turbines are Efficient, Reliable, Safe, and Quiet.

SOLUTIONS

Wind Energy

Harnessing the power of the wind to produce electricity is a clean and renewable way to make a difference while decreasing your expenses.

Solar Electric

With a solar electric power system from ALL SAVE ENERGY, you can harness the energy of the sun to power your home, small business, or large-scale commercial/agricultural operation with a monthly payment that is lower than your current utility bill.

Energy Audits

An energy audit is the first step to assess how much energy your home or business consumes and to evaluate what measures you can take your home or business more energy efficient. An audit will show you problems that may, when corrected, save you significant amounts of money over time.

ABOUT US

ALL SAVE ENERGY is a family owned business offering comprehensive energy solutions for homeowners and businesses that assist them in lowering utility bills, reducing environmental impacts, and increasing energy reliability and independence.

This holistic and integrated approach opens up new opportunities that provide the entire solution: *reduce, renew, save.*

We are committed to providing the best possible products on the market and the highest quality installation. We are customer-oriented, performance-driven, and dedicated to offering our customers long-term renewable energy solutions that immediately reduce their energy costs.

With a renewable energy electric power system from ALL SAVE ENERGY, you can harness the energy of the wind or sun to power your home, small business, or large-scale commercial/agricultural operation with a monthly payment that is lower than your current utility bill.
